

Statistics 955 Mid-term Exam Cover Sheet:  
Required for Submission and Grading

YOUR NAME

INSTRUCTIONS: Evaluate each of your solutions on the basis of 10 points per problem. Don't be overly modest; just mark the problem the way you think that it would be marked by any course instructor. You won't lose points for not marking yourself correctly, but you may learn something. In my experience, this kind of exercise substantially increases the quality of the solutions, since it motivates students to look back carefully over what they have done. As Pólya has taught us, the very act of "looking back" can be very instructive.

Your marks and my marks will probably be very close over all, though naturally they may vary a bit from problem to problem. To have your examination graded it must be accompanied with a filled out copy of this cover sheet attached.
